

# Telnet

Setup Instructions for Windows

**1701 Computer Networks Lab**

**Lecturer: Pantelis I. Kaplanoglou**

Department of Information and Electronic Engineering

**International Hellenic University**

# Step 1: Control Panel

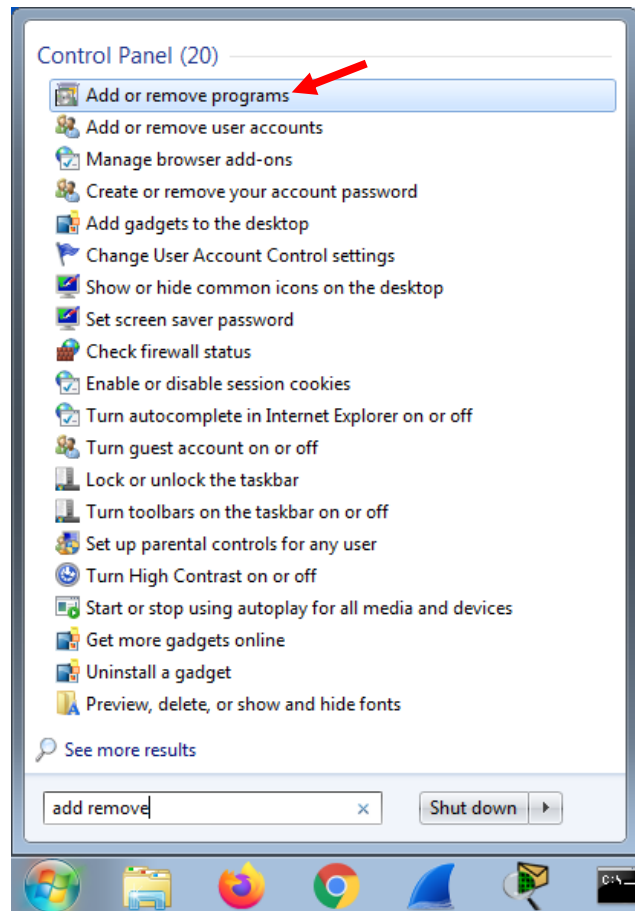

- Go to

Control Panel – Programs – Programs and Features.

- **Tip:** It is much easier to type:  
“Add Remove Programs”  
(EL: «Προσθαφαίρεση Προγραμμάτων»)  
in the corresponding search/charms box.
  - ✓ See next pages for Windows 7/10

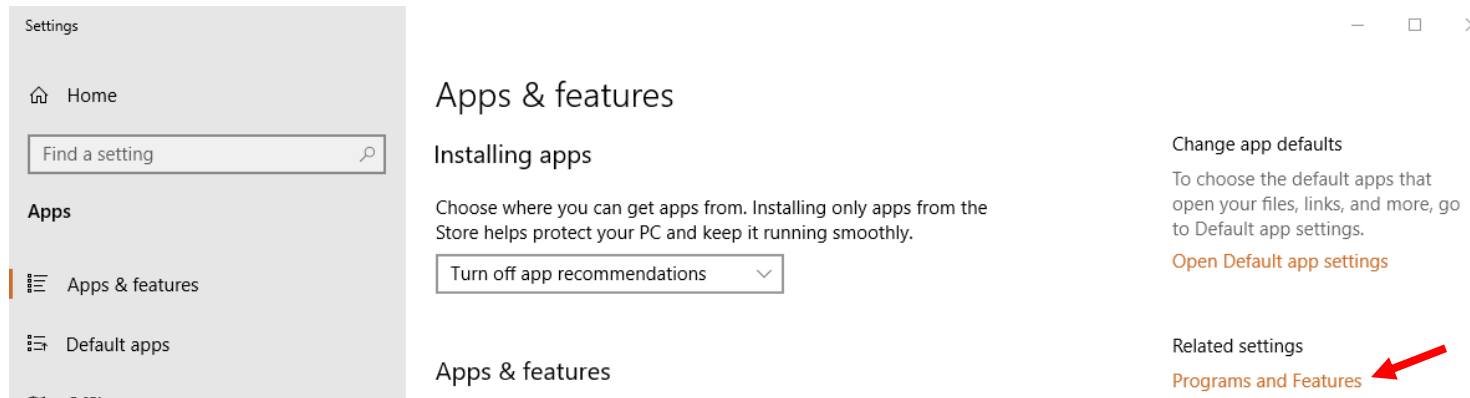

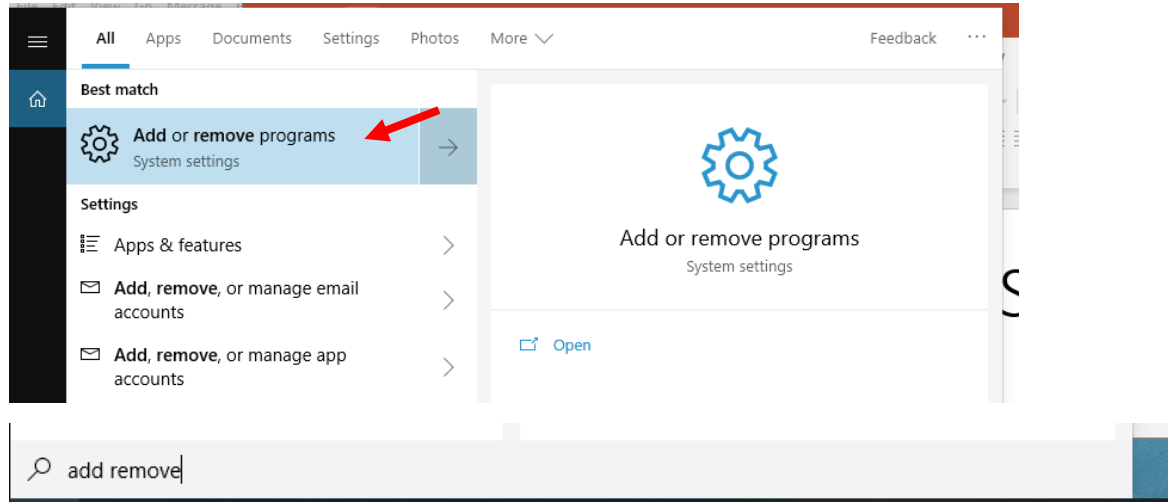

# Step 1: Control Panel

- Windows 7

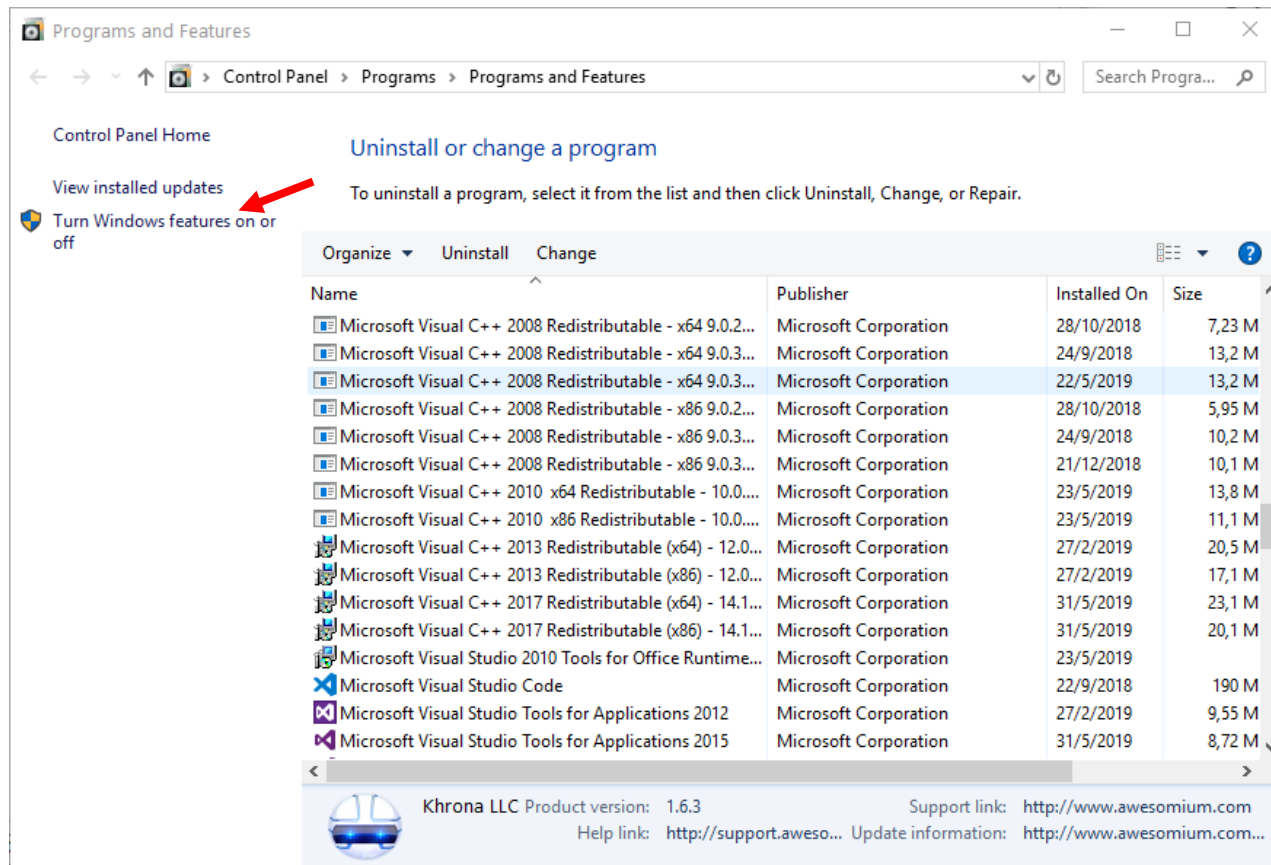

# Step 1: Control Panel

- Windows 10

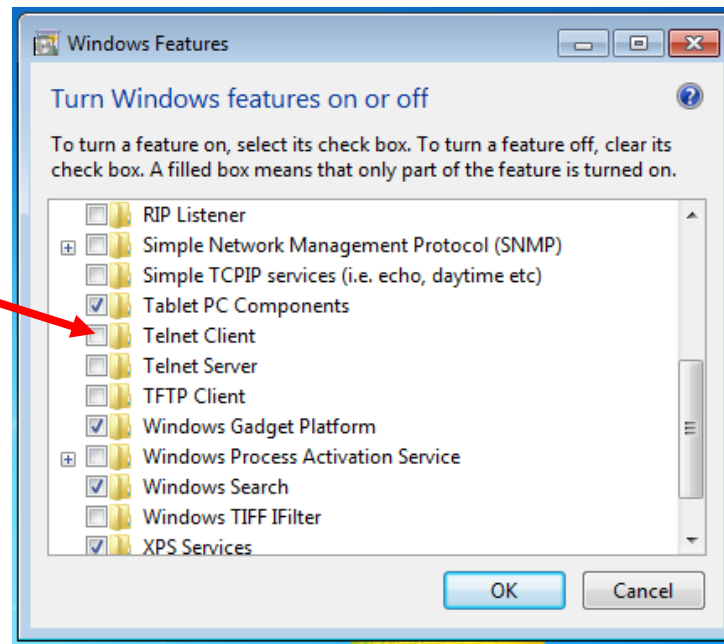

# Step 2: Add/Remove Programs

- Open the Windows features dialog.

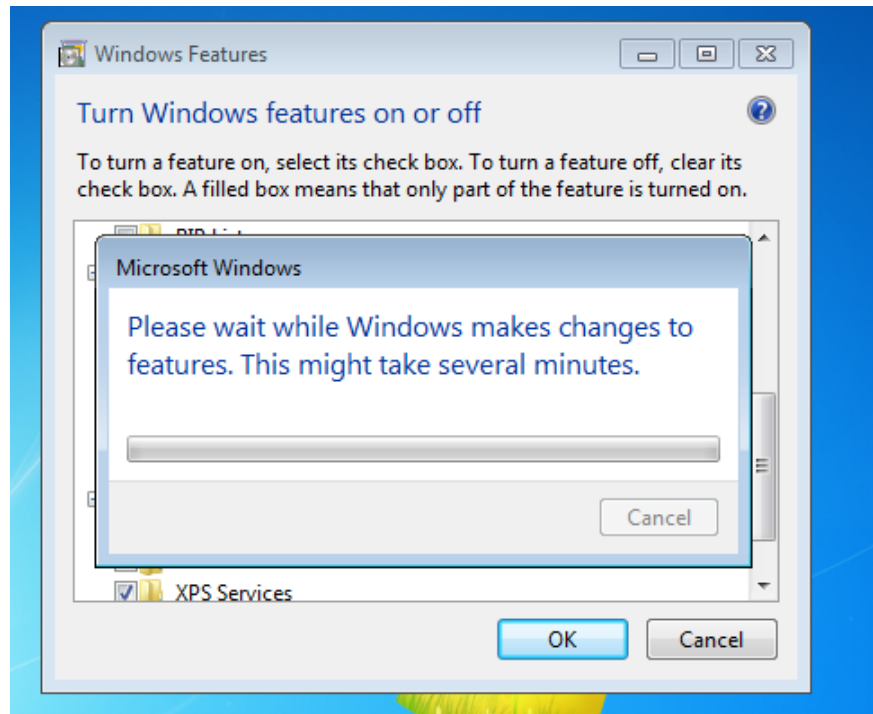

# Step 2: Add/Remove Programs

- Locate Telnet Client in the list.
- Check this and press OK .

# Step 2: Add/Remove Programs

- Wait for the installation to finish.
- You will not see any message if it was successful.

# Step 3: Check Installation

- Open Windows Command Prompt (press Win+R type `cmd`).
- Execute `telnet`.
- You should see the following:

```
C:\WINDOWS\system32\cmd.exe - telnet
Welcome to Microsoft Telnet Client
Escape Character is 'CTRL+]'
Microsoft Telnet>
```

See you at the lesson!
